SUMMARY

Laravel developer who's shipped production systems for UAE healthcare, hospitality, trading, and interior-design clients — from zero to live in weeks, not quarters. Backend-strong (APIs, SOLID architecture, MySQL), frontend-capable across React/Inertia.js and HTML5/CSS3/Ajax, and currently closing the gap into Vue.js/Angular through applied, AI-assisted builds.

EXPERIENCE

Backend Developer — Sociuu *Feb 2026 – Oct 2026*
Peshawar, Pakistan

- Architected modular, reusable RESTful APIs in Laravel using Action-based design patterns and SOLID principles, improving code maintainability and reducing duplication across the backend codebase.
- Strengthened platform security by implementing robust authentication and authorization mechanisms, reducing unauthorized-access risk across all API endpoints.
- Cut average API response time by re-architecting slow database queries and adding targeted indexing across core service endpoints.

Software Developer — AUN Digital *Oct 2025 – Jan 2026*
Karachi, Pakistan

- Delivered five production client platforms for UAE-based clients spanning healthcare, hospitality, trading, and interior design: three as **Laravel + Filament** back ends with **React/Inertia.js** front ends (Doctors For You, Emkaan, Al-Sadi Group), and two as **WordPress/Elementor** sites (Oilly Hair Care Salon, Altura) — enabling non-technical staff to manage day-to-day operations independently.
- Replaced manual, spreadsheet-based operations with custom Filament workflows for the Laravel-based client platforms, cutting routine admin tasks from hours to minutes per day.
- Maintained and updated multiple live **WordPress/Elementor** sites using HTML5 and CSS3, delivering responsive layout changes on tight client turnaround windows while coordinating requirements directly with stakeholders.

Software Engineer — Velosi Asset Integrity Limited *Jul 2023 – Aug 2025*
Islamabad, Pakistan

- Increased application performance by 40% on the Banibanna platform, measured by reduced page load times under production traffic, by optimizing backend logic and database queries.
- Raised user satisfaction by 25% on the Ukaam platform, as measured by client feedback scores, by redesigning the interface using HTML5, CSS3, and Ajax-driven dynamic profile updates.
- Achieved a 95% real-time message delivery rate by integrating Firebase Cloud Messaging for push notifications, enabling instant user-facing alerts.
- Built a full-cycle matrimonial web platform in Laravel, integrating secure Gmail-based authentication and Ajax for live profile updates, collaborating directly with the product team over a two-year engagement to translate requirements into shipped features.

SKILLS

Backend: Laravel (MVC, Action-pattern architecture), PHP, RESTful APIs, SOLID principles

Database: MySQL (Intermediate), Firebase (Intermediate)

Frontend: React, Inertia.js, HTML5, CSS3, jQuery, Ajax, DOM manipulation, WordPress/Elementor

Tools & Workflow: Git, GitHub, GitLab CI, Docker

Other: Solidity (smart contracts), Filament (admin panels)

Familiar With: Vue.js, Angular, TypeScript, Flutter, Android Studio, Next.js, Node.js, Redis, System Design (applied via AI-assisted development; actively building independent fluency)

EDUCATION

Bachelor of Computer Science — University of Agriculture, Peshawar (Aug 2018 – Apr 2022)
Focus: Software and Applications Development and Analysis

CERTIFICATIONS

- **Ajax** — Coursera (May 2024): applied to live dynamic profile-update features on the Ukaam platform.
- **Blockchain** — Coursera: capstone project became the Smart Contract Lottery System.

SELECTED PROJECTS

- **Smart Contract Lottery System** — Solidity-based lottery with automated, randomized winner selection and Ethereum payout logic. Started as the capstone of a Coursera Blockchain course (Oct 2021 – Jan 2022).
- **Voice Assistant** — Python-based conversational AI supporting voice-activated email composition and command-driven actions (May 2022 – Oct 2022).
- **Animal Encyclopedia** — Web forum for animal-category posts with secure login/signup and comment-based collaboration (Nov 2022 – Apr 2023).
